

AI Note

Project Title: **Security Advisory Digest**

Team Name: **Cyber Titans**

INTRODUCTION

Security Advisory Digest is an AI-powered application that helps organizations analyse security advisories and identify vulnerabilities affecting their technology stack. The system automatically matches advisories with organizational technologies and generates actionable security recommendations through an interactive dashboard.

Work Flow

1. Tech Inventory
2. Inventory Parser
3. Security Feed Collector
4. Vector Database (RAG)
5. AI Matching Agent
6. Summarizer

AI HELPED US

The following activities were supported using AI tools:

- Project Planning
- Code Generation
- Documentation Support
- Debugging and Learning

AI TOOLS USED

- GitHub Copilot
- Codex
- Ollama
- Gemini

Benefits

- Automates security advisory analysis, reducing manual effort.
- Quickly identifies vulnerabilities affecting the organization's technology stack.
- Generates AI-powered summaries and recommendations.
- Improves awareness and response time for security risks

Limitations

- Accuracy depends on the quality of advisory data sources.
- May not detect vulnerabilities for unsupported technologies.
- AI-generated recommendations require human verification.
- Limited by available public security feeds and APIs.

Future AI Enhancements

- Integrate advanced LLMs for more accurate risk assessment.
- Implement real-time security advisory monitoring and alerts.
- Add AI-based vulnerability severity prediction.
- Enable automated remediation recommendations and ticket creation.
